## Comprehensive 'De-Bugging' Service

Industrial espionage and discretely placed 'bugs' and listening devices that can pick up conversations through windows and even walls, may seem like the stuff of spy novels. But many businesses, especially those involved with product development and financial concerns, are increasingly under attack from this sort of activity. With a wide range of bugging devices freely available via internet retailers and on the high street, even your most private discussions are at the risk of being overheard by your competitors.

Pro-Tech Security Solutions Ltd utilises a comprehensive suite of equipment that protect and safeguard the most valuable of everyone's assets - information and knowledge. With many years experience, within the world of counter-surveillance and surveillance, Pro-Tech Security Solutions Ltd is convinced that individuals and companies must take these threats seriously and that critical information defence measures must be incorporated into all present and future personal and business security strategies.

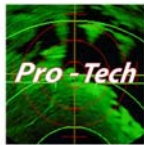

Utilising a wide range of effective equipment we will ensure that you are protected, and safeguarded, from those who wish to gain unauthorised access to your knowledge, information, ideas and confidential communications.

Widely known as "sweeping" the de-bugging service involves the detailed inspection of meeting rooms, trading floors, offices, boardrooms and private residences to ensure that no listening, camera, computer-hacking or telephone bugging devices have been deployed. Company, and private, vehicles are also 'swept' as they too are subject to the threat from covert surveillance and bugging.

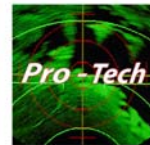

Common procedures for carrying out a "sweep" are as follows;

- Test conducted for radio signals which are generated from within a building.

- Pro-Tech Security Solutions Ltd ●
- Pentax House ● South Hill Avenue ● Harrow ● HA2 0DU ●
- Tel: +44 (0) 870 803 1713 ● Fax: +44 (0) 870 803 1714 ●
- E-Mail: [info@pro-tech.uk.com](mailto:info@pro-tech.uk.com) ● Web: [www.pro-tech.uk.com](http://www.pro-tech.uk.com) ●

*'Pro-Tech' what's important to you!!*

- Test conducted for radio signals which are generated from the perimeter or outside the building.
- Test to localise and trace strong radio signals. These can be generated by transmitting equipment widely available and extremely effective.
- Test to localise, and trace, GSM mobile phone signal which is one of the simplest ways to bug an area and listen from anywhere in the world.
- Test to carry out an inspection for any RF or other monitoring equipment.
- Dedicated physical search for electromagnetic emissions from electronic equipment and also examine fixtures and fittings for electromagnetic emission.

A de-bugging service is only effective at the time at which it is being carried out so with that in mind most business organisations would get this service carried out every at least every 3-6 months, or prior to critical meetings, to ensure they always protected.

Pro-Tech Security Solutions Ltd and its team have many years experience in the surveillance and counter surveillance field so we are always at the forefront of the latest technology developments so we are always equipped with up to date equipment when carrying out a “sweep”.

We are here to help “Pro-Tech” your best interests so if you haven’t already considered “sweeps” as part of your business security strategy please contact us to see how we can help.
